# Sirion<sup>®</sup>

The revolutionary **Sirion** featuring exclusive **Triple Coverage Illumination** is the brightest LED fixture in the industry

The three major areas of a nighttime scene are illuminated by **Sirion Triple Coverage optics technology**:

- The critical work area is illuminated by focused spot light optics
- The apparatus is covered by short-range flood lamps
- The entire scene is evenly illuminated by long-range flood lights

Effective lumens are a true measure of real world light output of a fixture.

Raw lumens don't tell the entire story. Bigger numbers don't always mean more light.

### **Sirion Light Package**

Raw Lumens: 220,000

Effective Lumens: 122,340

30 LUX of light is considered safe for a work area by NFPA

**Over 7,100 sq. ft. of safe work area at 30+ lux**
